Project Submission Report

Student Details

- Full Name: Deborah Kaburu, 166531,ICS4D
- GitHub Username: Deborah-dev-lab
- Email: deborah.kaburu@strathmore.edu

2. Deployed Project Link

- Live GitHub Pages URL: <https://deborah-dev-lab.github.io/puzzleplay/>

The project is deployed through GitHub Actions using a dedicated **Deploy PuzzlePlay to GitHub Pages** workflow. The workflow builds the Vite application and deploys the generated **dist** directory to GitHub Pages.

Deployment workflow:

<https://github.com/Deborah-dev-lab/puzzleplay/blob/main/.github/workflows/deploy.yml>

The repository's Actions history shows three deployment runs, including the latest deployment after resolving the Rolldown/platform-specific dependency issue.

3. Reflection — Grounded in Your Git History

A. Your Best Commit

- Commit URL: <https://github.com/Deborah-dev-lab/puzzleplay/commit/57e9e0a>
- Why this one?

I selected **fix: remove platform-specific rolldown binding** because it follows the Conventional Commits format by clearly identifying the change as a **fix** and giving a concise description of what was corrected. The commit also represents a real technical problem encountered during development and its resolution.

The commit can be verified directly in the repository history, where it appears alongside other structured **feat:**, **fix:**, and **chore:** commits.

B. A Mistake or Struggle

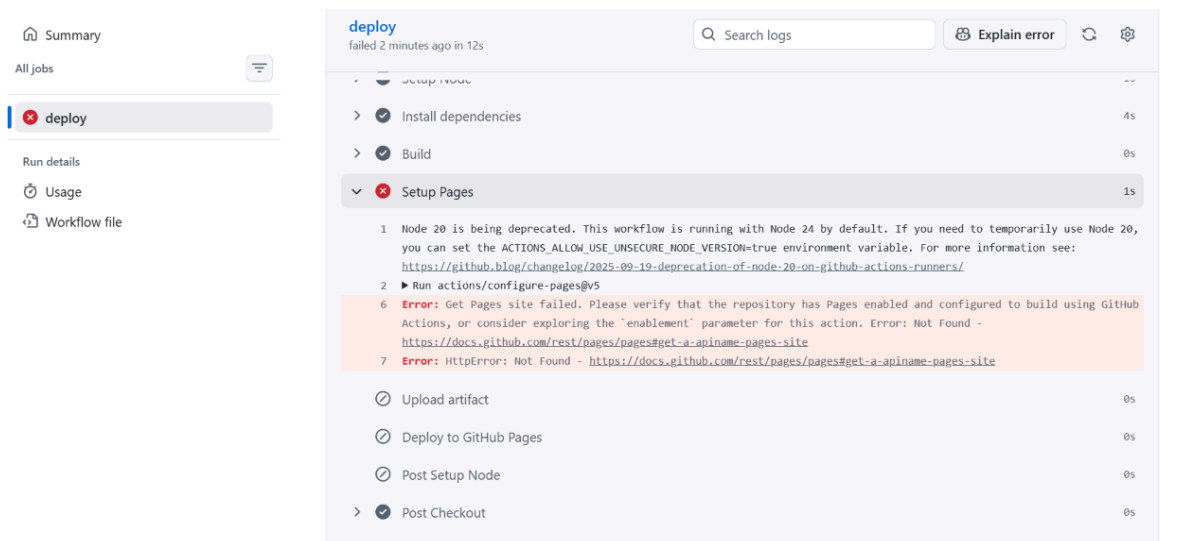

- **Link to the evidence:**
<https://github.com/Deborah-dev-lab/puzzleplay/issues/12>
- **What happened and how did you recover?**

During deployment, PuzzlePlay encountered dependency and build problems that prevented the application from deploying correctly to GitHub Pages. I tracked the problem using Issue #12 and subsequently made separate fixes for the GitHub Actions dependency installation and the platform-specific Rolldown binding.

The recovery is visible through the sequence of commits:

- **chore: configure github pages deployment**
<https://github.com/Deborah-dev-lab/puzzleplay/commit/6959282>
- **fix: resolve github actions dependency install**
<https://github.com/Deborah-dev-lab/puzzleplay/commit/59ccc76>
- **fix: remove platform-specific rolldown binding**
<https://github.com/Deborah-dev-lab/puzzleplay/commit/57e9e0a>

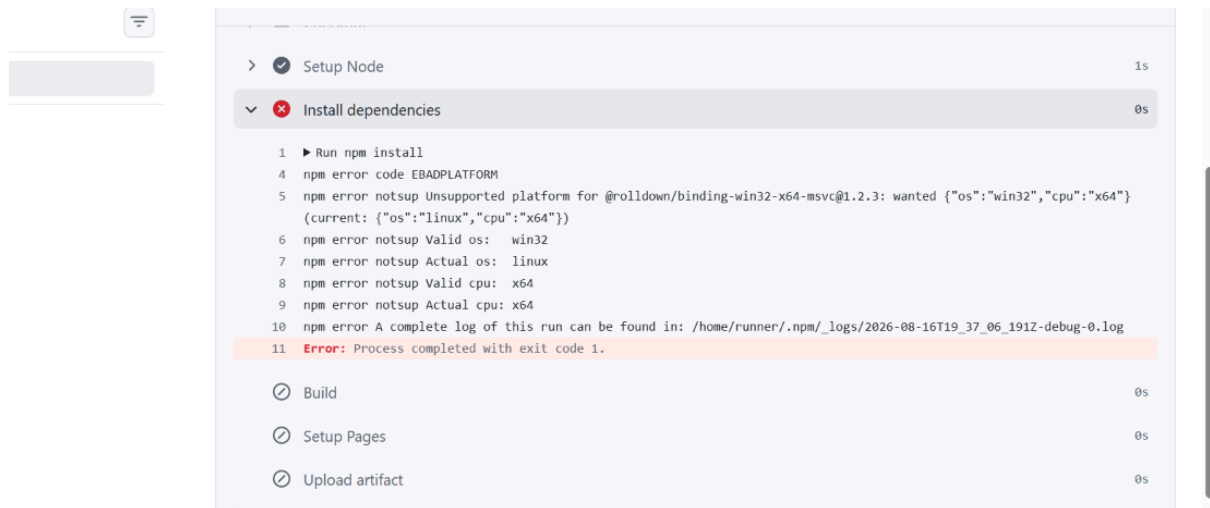

The GitHub Actions history confirms these commits triggered successive deployment attempts.

The screenshot displays the GitHub Actions interface for a workflow named 'deploy'. On the left sidebar, the 'deploy' job is selected under 'All jobs'. The main panel shows the workflow steps: 'Setup Node', 'Install dependencies', 'Build', 'Setup Pages' (failed), 'Upload artifact', 'Deploy to GitHub Pages', 'Post Setup Node', and 'Post Checkout'. The 'Setup Pages' step is expanded, revealing the following log entries:

```

1 Node 20 is being deprecated. This workflow is running with Node 24 by default. If you need to temporarily use Node 20,
  you can set the ACTIONS_ALLOW_USE_UNSECURE_NODE_VERSION=true environment variable. For more information see:
  https://github.blog/changelog/2025-09-19-deprecation-of-node-20-on-github-actions-runners/
2 ▶ Run actions/configure-pages@v5
6 Error: Get Pages site failed. Please verify that the repository has Pages enabled and configured to build using GitHub
  Actions, or consider exploring the 'enablement' parameter for this action. Error: Not Found -
  https://docs.github.com/rest/pages/pages#get-a-apiname-pages-site
7 Error: HttpError: Not Found - https://docs.github.com/rest/pages/pages#get-a-apiname-pages-site
  
```

C. A Pull Request You're Proud Of

- **PR URL:**
<https://github.com/Deborah-dev-lab/puzzleplay/pull/15>
- **What did you check before merging?**

I selected PR #15 because it contains a complete Sudoku implementation with a clear feature description and a focused set of commits. Before merging, I would review the changed files, verify that the Sudoku route and game functionality work correctly, check the responsive styling, and confirm that the application builds successfully.

The PR specifically documents the addition of the 9×9 Sudoku game, puzzle data, selectable cells, number input, clear/new puzzle controls, answer checking, routing, and responsive PuzzlePlay styling.

Important: PR #15 is currently **open**, not merged, so it should not be described as a completed/merged PR unless it is merged before submission.

D. One Thing You Would Do Differently

- **What would you change?**

If I restarted the project, I would make the issue-to-branch-to-PR workflow stricter from the beginning. I would create the issue first, assign it to the appropriate milestone, create the corresponding issue-linked feature branch, and then make the PR with the issue automatically linked.

This would make traceability stronger and reduce the amount of project-management work that had to be organized later.

- **Link to the evidence of the original decision:**

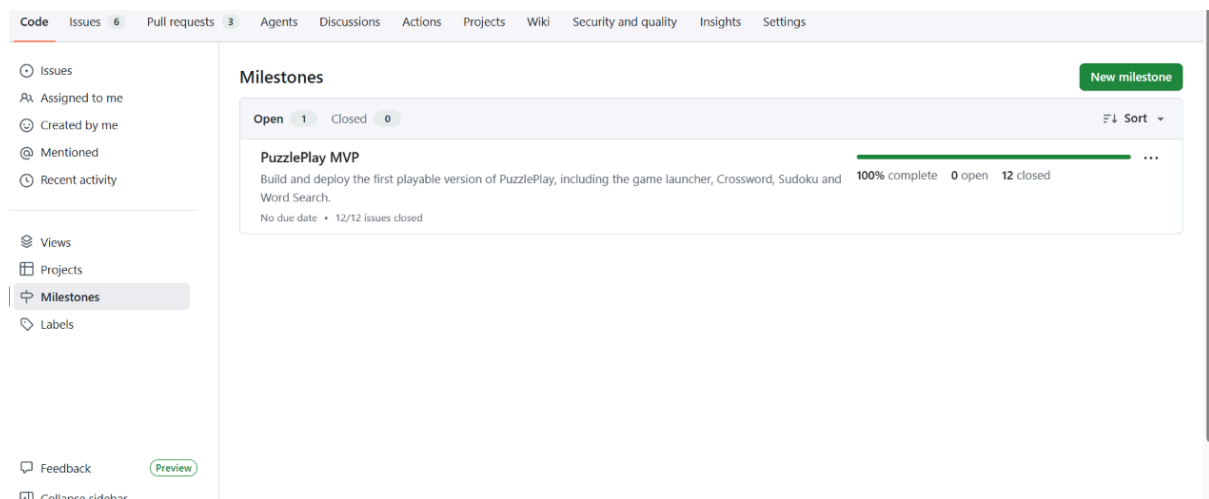

<https://github.com/Deborah-dev-lab/puzzleplay/branches>

The repository currently shows the feature branches *feat/2-game-launcher*, *feat/3-game-card*, *feat/4-crossword*, and *feat/5-sudoku*, demonstrating the feature-based branching approach already used.

4. Screenshots of Key GitHub Features

A. Milestones and Issues

Screenshot:

- **Caption:**

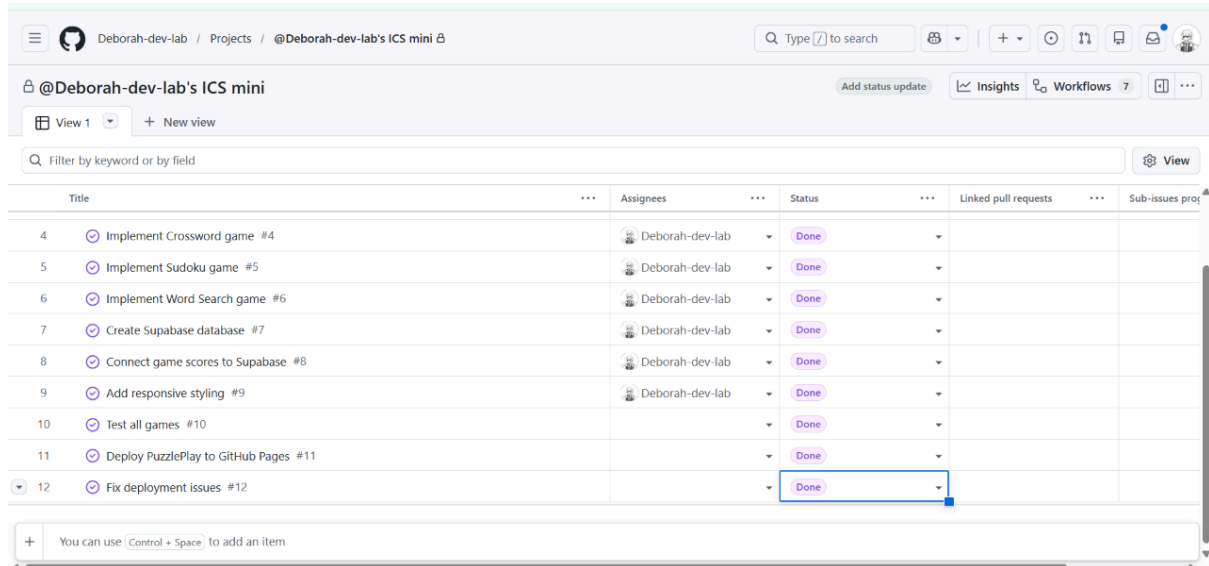

The PuzzlePlay MVP milestone tracks the development of the first playable version of the application. It currently shows 9 of 12 issues completed, representing 75% progress toward the milestone.

Evidence:

<https://github.com/Deborah-dev-lab/puzzleplay/milestones>

B. Project Board

Screenshot:

Title	Assignees	Status	Linked pull requests	Sub-issues
4. Implement Crossword game #4	Deborah-dev-lab	Done		
5. Implement Sudoku game #5	Deborah-dev-lab	Done		
6. Implement Word Search game #6	Deborah-dev-lab	Done		
7. Create Supabase database #7	Deborah-dev-lab	Done		
8. Connect game scores to Supabase #8	Deborah-dev-lab	Done		
9. Add responsive styling #9	Deborah-dev-lab	Done		
10. Test all games #10		Done		
11. Deploy PuzzlePlay to GitHub Pages #11		Done		
12. Fix deployment issues #12		Done		

- **Caption:**

The GitHub Project Board organizes PuzzlePlay development tasks according to their current workflow status, allowing issues to be tracked from planned work through active development and completion.

Project:

<https://github.com/Deborah-dev-lab/puzzleplay/projects>

C. Branching Architecture

Screenshot:

The screenshot shows the GitHub interface for the 'puzzleplay' repository. It displays three sections: 'Default', 'Your branches', and 'Active branches'. Each section contains a table of branches with columns for Branch, Updated, Check status, Behind/Ahead, and Pull request.

Branch	Updated	Check status	Behind	Ahead	Pull request
main	25 minutes ago	✓ 1 / 1			Default

Branch	Updated	Check status	Behind	Ahead	Pull request
feat/5-sudoku	3 days ago		4	5	#15
feat/4-crossword	3 days ago		4	4	#14
feat/3-game-card	3 days ago		4	3	
feat/2-game-launcher	3 days ago		4	2	#13

Branch	Updated	Check status	Behind	Ahead	Pull request
feat/5-sudoku	3 days ago		4	5	#15
feat/4-crossword	3 days ago		4	4	#14
feat/3-game-card	3 days ago		4	3	
feat/2-game-launcher	3 days ago		4	2	#13

- **Caption:**

The repository uses feature-based branch naming, including *feat/2-game-launcher*, *feat/3-game-card*, *feat/4-crossword*, and *feat/5-sudoku*, making the purpose of each development branch immediately identifiable.

Branch evidence:

<https://github.com/Deborah-dev-lab/puzzleplay/branches>

D. Pull Requests & Traceability

Screenshot:

The screenshot shows the GitHub interface for the 'puzzleplay' repository, specifically the 'Pull requests' tab. It displays a list of pull requests with columns for Filters, Labels, Milestones, and a 'New pull request' button.

Filters	Labels	Milestones	New pull request
3 Open, 0 Closed			
Feat/5 sudoku			
Feat/4 crossword			
Feat/2 game launcher			

- **Caption:**

Pull requests are used to separate feature development from the main branch. PR #15 demonstrates the Sudoku development workflow from the *feat/5-sudoku* branch toward *main*.
